

How to Install MT5

Only 5 Steps Stand Between You and Having Your MT5 Up and Running.

MT5 for Windows

- ▶ Double click on the downloaded installation file.
- ▶ Click on "Next".
- ▶ Wait, until MT5 has downloaded and installed then click on "Finish".
- ▶ The installation process is complete, now you can sign in.

MT5 for Mac

- ▶ Double click downloaded file.
- ▶ Drag & drop the Axiory logo to the applications folder.
- ▶ Click on "Axioryasia.MT5" and then click on "Open".
- ▶ On the next screen, click "Open" again.
- ▶ The installation process is complete, now you can sign in.

MetaTrader 5 for **MacOS** supports the **Apple M1 chip** and works on any system version, including Big Sur.

White label program features are temporarily unavailable for the macOS version.

In case the message "Can't open because the developer is unconfirmed" appears to Mac users

1. Click the **"Click to change"** button at the bottom left of the screen. You will need to enter a username and password for the administrator account, so be prepared in advance.
2. Select **"Allow all applications"** in **"Perform downloaded applications"**.
3. Selecting **"Allow All Applications"** reduces security. Click **"Allow all Applications"** as the warning will be displayed.

After changing the above, please install MetaTrader 5 again.

After installation is complete, open this screen again and restore the original settings.
